**2020: International Year of Plant Health**

The International Year of Plant Health raises awareness of the importance of healthy plants for sustaining life on Earth. Plants are vital for human health, ecosystem functions, food security and the economy. Up to 40 per cent of global food crops are lost each year due to disease and pests, which cost the global economy around US$220 billion annually.

The Centre for Crop and Disease Management at Curtin provides Australian growers with solutions to combat major fungal pathogens of cereals, cottons and pulse crops, as well as strategies to ensure the sustainable and effective management of fungicides. Through its research, the Centre aims to reduce the economic impact of crop diseases and improve yield and profitability for Australian grain growers.
